ABOUT THE REPORT

“Security was paramount when Vivek and I worked together on a supply chain transformation of the world’s largest explosive company. A minor lapse in security could easily lead to significant damage to personnel and material. Most supply chain managers continue to underestimate the importance of security, how to achieve it and ensure that it is kept in place and front of mind. Organisations need to be serious about ensuring supply chain security and minimise the risks to employees and the organisation.”

Wayne Klose,
Supply Chain Manager,
Global Systems, Professional Lighting Solutions
